

Market, weather, news, and production information for the Canadian producer

DTN Canada delivers real-time information covering markets, weather, news, and production information for the needs of Canadian grain and livestock producers.

With prices and commentary on the cattle and swine industries, along with large grain and specialty crops, DTN Canada allows you to customize this data to meet the specific needs of your operation. Online users can customize their content and layout in a personalized "control center" for a unique dashboard view of markets, weather and top news.

Designed specifically for producers from British Columbia to Quebec, DTN Canada provides futures quotes and cash bids, along with weather conditions and forecasts for their local area. More than 70 percent of top producers in North America trust and rely on DTN/*The Progressive Farmer* to make their critical marketing and production decisions.

Better marketing decisions

Make sense of the market and your options. DTN/*The Progressive Farmer* offers exclusive opening, midday, and closing commentary from the grains and livestock markets, specific trading recommendations on soft red winter wheat, hard red spring wheat, soybeans, corn, canola, and other specialty crops, along with a market outlook for cattle and swine. This focused, specialized information will help you make more profitable decisions for short- and long-term strategies.

New! Precip Gauge improves numerous operational decisions with field-level forecasted and historical precipitation, plus you can utilize evapotranspiration data to identify significant water loss from drainage basins.

New! DTN/*The Progressive Farmer* information over new Google® views helps you enhance your weather and market-related decisions with new Canadian precipitation, corn heat unit accumulations, and our North American drought monitor.

New! Option premium and historical spreads charts provide you with a better perspective on current market behaviors by showing you the history of any given option premium or futures spread.

Measurement and currency preferences let you control how you view grain and fuel prices and avoid costly conversion errors to help protect your bottom line.

Our Canadian government grain statistics page shows you what's important to both supply and demand — all in one easy location — for more profitable decisions.

Get text and email cash bid alerts on a per-agribusiness or commodity basis, based on your preferences. This helps you stay on top of fast-moving markets and act quickly to save time and money.

Get custom recommendations for preparing tank-mixes — ensuring maximum compatibility and field performance. This helps you avoid costly mistakes and protect your bottom line. You can even save, modify and print recommendations.

Produce more

View new plotted and contoured agronomy and weather maps to help you quickly and easily make key production management decisions, including soil temperatures, accumulated growing degree days, growing degree day differential, accumulated corn heat units, and long-range precipitation and temperature outlooks.

Get key insight into the path of storms, accumulations, and wind for many weather events that impact your operational decisions, using our new animated path graphics.

Reduce weather-related risks with detailed weather maps from Environment Canada, current condition updates, and at-a-glance local forecasts for your locale and the surrounding area from the largest commercial weather service provider in the world.

Plan harvest and field activities such as cutting hay and spraying with detailed hourly forecasts for up to 72 hours, wind speeds, frost and freeze potentials, and regional radar that illustrates where a weather system is in relation to your operation.

View our weather information over detailed satellite field imagery maps for pinpointed accuracy. Display current conditions, forecasts, and historical data so you know what to expect and where. Overlay regional, local and national cash and basis prices for a complete picture and faster, more profitable decisions.

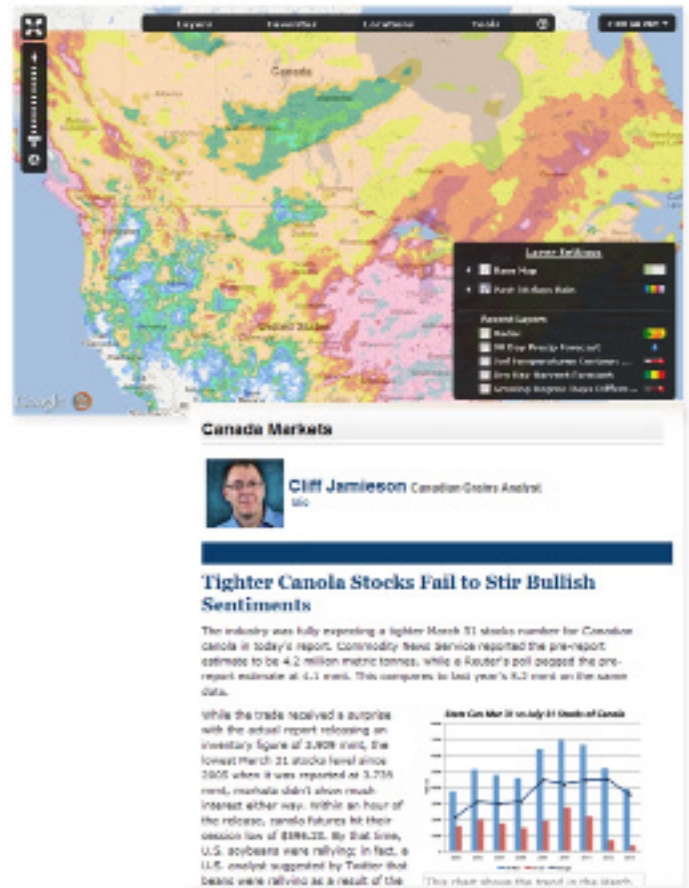

Buy lower, sell higher

Reduce input costs and make purchasing decisions at the optimum time with comprehensive fuels and fertilizer data. Two of the biggest expenses a producer faces are fuels and fertilizer, so DTN Canada provides futures and cash analysis, advice on where prices are going, and charts showing current prices against historical prices.

Control replacement costs. Get a comprehensive listing of local and national auction results to see the current value and market trends for cattle and hogs in the United States and Canada.

News you can use

Monitor critical factors affecting production and generate greater yields with the latest agronomy news and coverage of crop diseases and insects. You'll get information on the latest field treatments to help you make the best decisions and increase profits.

Farm business content to help you plan and protect profits — including farm tax information and advice and daily updates on ag interest rates. Comprehensive U.S. Farm Bill resources are also included to help Canadian producers stay aware of policy in the United States.

Stay informed on the latest domestic and foreign trade issues, with the largest newsroom in the industry that concentrates specifically on current ag issues, political and government policies, key industry events, market forecasts, and international markets that can impact your business and bottom line. No other service provides more comprehensive information critical to agriculture markets and production than DTN/The Progressive Farmer.
