

## A new way to scout crops with a single iPad® app

Observation-based scouting services can provide valuable insight to help combat weed resistance, bugs, disease, and to control rising input and crop protection costs. With it, your producers can catch and resolve critical concerns more quickly; and by delivering quality scouting services and solutions that help resolve issues, you can grow your reputation as a trusted advisor and generate more revenue.

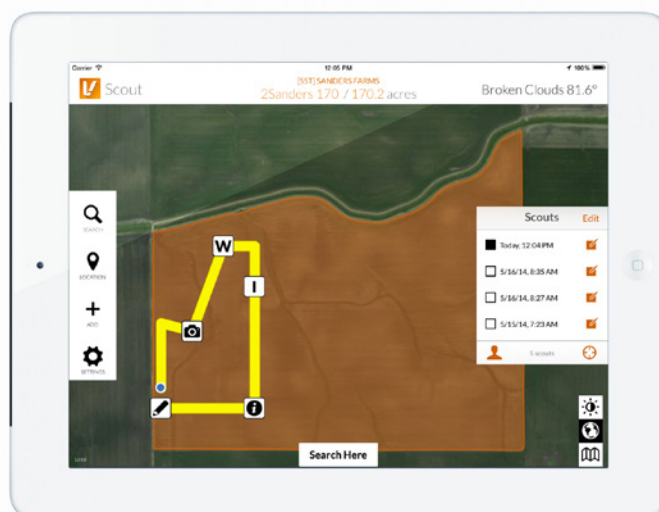

### Improve scouting operations today

Imagine throwing out the paper process of scouting, and recording crop issues spatially, in real time — all in a single app on an iPad. Imagine all of your field scouts working from a single tool, one field reference — and syncing data back to your producers' records. Imagine all of this controlled via a powerful Web-based command center.

With DTN Scout, you can do all of this right now, affordably. It is the industry's most robust mobile scouting platform. With it, you can cover more crops — over 300 different types — than with any other tool. It also provides a comprehensive database of crop-related issues — more than 1,300 of them and growing — including images and additional functionality.

### Unify scouting records

Simple yet flexible, DTN Scout allows you to work seamlessly off of the same set of field boundary records that your producers use. You can also integrate your SST Summit records, other precision ag software records, or upload your own SHP files into our scouting platform. Create complete reports with detailed, pin-by-pin notes, photos, and issues. You can also send a summary report or create detailed reports on the Web.

### It works the way you do

DTN Scout allows you to do your job on the fly — online or off. Locate fields, view past reports, use our new Corn Yield Estimator, save scouts, and finish offline. With DTN Scout, you can maximize scouting efforts in minimal time.

### See it all more easily

DTN Scout's new high contrast mode allows you to easily view the screen in outdoor conditions, as well as scout trails and track where you have been — all for easier scouting.
