

## Get a closer look at everything you manage

Optimize your operations with the only video system designed for multiple locations

Do you know what's really happening at every retail store or agribusiness location you're responsible for?

Are your assets securely protected? Are your employees complying with safety regulations? Is equipment being operated properly? What's happening at the parts counter at all your locations? Are your stores opening and closing on time? Do any of your shops have extra capacity? Are all your employees working efficiently? Are customers consistently treated well?

With the MultiSight™ video system from DTN, you'll have a simple, intuitive way to check in on each of your sites so you can identify operational issues, address them, and improve your profitability.

**No equipment to buy. No complicated options.**

**No per user charges.**

The MultiSight system is a video surveillance service that delivers monitoring across multiple locations, making it the ideal solution for ag retailers and large producers with several locations to manage. Consisting of cameras, DVR/gateway, software/apps, and cloud storage, the system is installed and maintained by skilled DTN technicians, and purchased as a service through a monthly subscription. You'll avoid all the headaches and expense of owning your own equipment.

You simply select a monitoring package based on the number of cameras needed at each location. The price is the same no matter how many users you have, so you can give access to all your managers and staff without increasing costs. And there are no hidden fees. It doesn't get any simpler than that.

**Crisp, clear HD video. All the time.**

What use is video monitoring if the picture is fuzzy? You'll never have that problem with MultiSight. It delivers crisp 720p video that's 11 times higher resolution than the typical analog security camera. It's always recording in high definition with a high frame rate, so you can really see what's going on in your operations.

And because it uses Smart Bandwidth management, your network applications flow freely while your business-critical transactions remain secure.

We proactively monitor your system's health to ensure that it's always working. If for any reason your recorder or cameras go offline, we'll notify you immediately and begin resolving the issue.

**Born mobile.**

The MultiSight video system was designed with the mobile user in mind. Install the free MultiSight app on your Apple® iPhone® or iPad®, and you'll have easy access to every site's video feed — no matter where you go or what time it is. And you can manage users for all your locations from a single, simple dashboard.

The software is intuitive and easy to use. Camera views can be given common-sense labels, such as service bay, parts counter, back office, and so on. And you can choose which views to display. For example, you can monitor all cameras at a single location, or choose to look at all similarly labeled cameras from every store — such as all of the parts counter views — on a single screen. It's totally flexible and remarkably simple.

Want someone else to see what you're seeing? With MultiSight's cloud storage, you'll never need to burn another DVD or copy files to a flash drive just to share a video. Just tap the share button and you can select, trim, and export video to your cloud library in full-motion HD resolution, and send links by email instead of mailbox-clogging files.
